paragraphs of this report.)	25X1
·	
5. East German barges may arrive at Stettin via either the Oder-Spree Kanal	
or the Hohenzollern Kanal. From their location north of the grain elevator,	
and from traditional patterns of trade along the Oder, it is quite possible	
these barges may be carrying grain. Czech barges normally carry ore upstream	£.
to the Silesian complex and coal downstream to Stettin, often for transship-	
ment via ocean freighter. An unusual number of Czech barges at Stettin might	
indicate an extension and/or improvement of the upper navigation limit, which	
formerly extended only as far as Moravska Ostrava (10 miles beyond the border	).
